LISTING OF THE CLAIMS:

This listing of claims will replace all prior versions, and listing, of claims in the application:

Claim 1 (Currently Amended) A metal oxide semiconductor (MOS) device comprising:
a semi-conducting substrate having source and drain regions;
a gate dielectric of less than 100 Å thickness on said semi-conducting substrate, said gate dielectric is selected from the group consisting of SiO₂, nitrided SiO₂, Si₃N₄, HfO₂, ZrO₃, Y₂O₃, La₂O₃, silicates or nitrogen additions of HfO₂, ZrO₃, Y₂O₃ or La₂O₃, and mixtures thereof; and
a gate formed of a metal comprising Re on top of said gate dielectric, said gate comprising Re contains no halogens therein.

Claim 2 (Previously Presented) A metal oxide semiconductor device according to claim 1, wherein said gate dielectric has a thickness of less than 50 Å.

Claim 3 (Cancelled)

Claim 4 (Previously Presented) A metal oxide semiconductor device according to claim 1, wherein said gate dielectric is selected from the group consisting of HfO₂, ZrO₃, Y₂O₃, La₂O₃, and mixtures thereof including silicates and nitrogen additions.

Claim 5 (Previously Presented) A metal oxide semiconductor device according to claim 1, wherein said gate dielectric is SiO₂.

Claim 6 (Cancelled)

Claim 7 (Original) A metal oxide semiconductor device according to claim 1, wherein said semi-conducting substrate is p-type or n-type.

Claim 8 (Original) A metal oxide semiconductor device according to claim 1, wherein said semi-conducting substrate is formed of a material selected from the group consisting of silicon, SiGe, SOI, Ge, GaAs, and organic semiconductors.

Claim 9 (Original) A metal oxide semiconductor device according to claim 1, wherein said semi-conducting substrate is formed of silicon.

Claim 10 (Currently Amended) A field effect transistor (FET) comprising:
a semi-conducting substrate having at least one source and one drain region;
a gate dielectric layer of less than 100 Å thickness on said semi-conducting substrate, said gate dielectric layer is selected from the group consisting of SiO₂, nitrided SiO₂, Si₃N₄, HfO₂, ZrO₃, Y₂O₃, La₂O₃, silicates or nitrogen additions of HfO₂, ZrO₃, Y₂O₃ or La₂O₃, and mixtures thereof; and
a gate formed of a metal comprising Re on top of said gate dielectric layer, said gate comprising Re contains no halogens therein.

Claim 11 (Previously Presented) A field effect transistor according to claim 10, wherein said gate dielectric layer has a thickness of less than 50 Å.

Claim 12 (Cancelled)

Claim 13 (Previously Presented) A field effect transistor according to claim 10, wherein said gate dielectric layer is selected from the group consisting of HfO₂, ZrO₃, Y₂O₃, La₂O₃, and mixtures thereof including silicates and nitrogen additions.

Claim 14 (Original) A field effect transistor according to claim 10, wherein said semi-conducting substrate is p-type or n-type.

Claim 15 (Original) A field effect transistor according to claim 10, wherein said semi-conducting substrate is formed of a material selected from the group consisting of silicon, SiGe, SOI, Ge, GaAs, and organic semiconductors.

Claim 16 (Original) A field effect transistor according to claim 10, wherein said semi-conducting substrate is formed of silicon.
